

HUBUNGAN ANTARA SOSIALISASI DENGAN SIKAP PERAWAT TERHADAP PENGURUSAN SURAT IZIN PRAKTIK PERAWAT DI WILAYAH KABUPATEN PEKALONGAN

Dedy Suparyanto, Mokhammad Arifin, Dafid Arifianto

ABSTRAK

Surat Izin Praktik Perawat (SIPP) adalah bukti tertulis yang diberikan kepada perawat untuk menjalankan praktik perawat perorangan/berkelompok. SIPP ini pada kenyataannya tidak banyak dimiliki oleh perawat yang praktik mandiri di banyak daerah di Indonesia. Sosialisasi merupakan langkah terbaik dalam menyampaikan peraturan mengenai SIPP ini. Sosialisasi yang efektif diharapkan dapat memberikan perubahan sikap terhadap perawat dalam pengurusan SIPP. Penelitian ini bertujuan merangsang perawat untuk mau mengurus SIPP. Tujuan penelitian ini adalah untuk mengetahui hubungan antara sosialisasi dengan sikap perawat terhadap pengurusan surat izin praktik perawat (SIPP) di Kabupaten Pekalongan. Penelitian ini menggunakan metode *deskriptif* dengan pendekatan *cross sectional*. Teknik *sampling* menggunakan total populasi. Jumlah responden sebanyak 217 perawat. Hasil uji *Chi Square* didapatkan bahwa ada hubungan antara sosialisasi dengan sikap perawat terhadap pengurusan surat izin praktik perawat ($p = 0,012$). Hasil penelitian menyimpulkan bahwa ada hubungan antara sosialisasi dengan sikap perawat terhadap pengurusan surat izin praktik perawat. Sosialisasi sangatlah penting dalam upaya penerapan suatu peraturan. Sosialisasi yang dilaksanakan dengan efektif dapat memberikan perubahan sikap pada perawat, dari yang semula kurang mendukung jadi mendukung. Sehingga perawat menyadari akan pentingnya izin bagi praktiknya, dan berkemauan untuk mengurus SIPP.

THE CORRELATION BETWEEN SOCIALIZATION WITH NURSE ATTITUDE TO ORDER NURSE PRACTICING LETTER OF LICENCE IN THE PEKALONGAN REGENCY

Dedy Suparyanto, Mokhammad Arifin, Dafid Arifianto

ABSTRACT

Nurse Practicing Letter of Licence (SIPP) are proof written that give to the nurse for going individual nurse practicing or group. A lot of nurses in Indonesia don't have Nurse Practicing Letter of Licence (SIPP) in fact. Socialization is one of the best step to communicate about regulation to the nurses. Effective socialization is expected to give changing attitude to nurse in licence application. This research purpose is to stimulate nurses to order the licence. This research purpose to be know correlation between socialization with nurse attitude to order nurse practicing letter of licence (SIPP) in Pekalongan's Regency. This research utilizes method descriptive-correlative design with cross sectional approximation. To collect the sample utilize total population. Total respondent are 217 nurses. Result of Chi Square test is there was correlation between socialization with nurse attitude to order nurse practicing letter of licence ($p = 0,012$). The result of test concludes that there was correlation between socialization with nurse attitude to order nurse practicing letter of licence. Socialization is transcendent in the effort implement a regulation. Socialization must be informed more effectively to give changing attitude to the nurses, nurse attitude doesn't support before become support later. So nurses to be aware of order the licence for their practicing in the future.
