ABSTRACT

Background: Hemodialysis patients need nurses' caring behavior. The patients are undergoing hemodialysis therapy. They experience many changes. The patients will tire easily, feel uncomfortable, need help and support from others. Caring behavior is an attitude of caring for the patient in providing nursing care with sincerity and compassion, either through communication or direct action to achieve and maintain health or achieve peaceful death.

Purpose: This literature review aimed to review the literature related to nurses' caring behavior for hemodialysis patients.

Sample: the sample used in this study was all patients undergoing hemodialysis therapy.

Methods: Literature review was carried out using articles/ journals sourced from online databases. They were pubmed, google scholar and the national library. The keywords were "caring behavior of hemodialysis nurses", "caring behavior", "caring of nursing", and "hemodialysis" during the last 5 years.

Result: Based on several articles or journals used in the literature review, it was stated that hemodialysis patient assess the caring behavior of hemodialysis nurses as having very good caring behavior.

Conclusion: Nurses' caring behavior is needed for hemodialysis patients to achieve and maintain their health.

Keywords: *Caring Behavior, Nurses, Hemodialysis Patients*
