

ABSTRAK

Gambaran Penerapan Rekam Medis Elektronik dari Perspektif Perawat di RSI PKU Muhammadiyah Pekajangan Pekalongan

Rodhiyatul Khasanah¹, Mokhamad Arifin²

Pendahuluan: Setiap rumah sakit diwajibkan untuk mematuhi pendokumentasian semua kegiatan yang dilakukan dalam sistem informasi manajemen rumah sakit (SIMRS). Kebijakan ini menekankan pentingnya penerapan sistem informasi yang terintegrasi untuk mendukung pelayanan terbaik di rumah sakit, termasuk dengan penggunaan rekam medis elektronik. Meskipun rekam medis elektronik telah banyak diterapkan, kajian spesifik mengenai penggunaannya dari perspektif keperawatan masih terbatas. Penelitian ini bertujuan untuk mengetahui gambaran penerapan rekam medis elektronik dari perspektif perawat di RSI PKU Muhammadiyah Pekajangan Pekalongan.

Metode: Penelitian ini merupakan penelitian deskriptif kuantitatif dengan pendekatan *cross sectional*. Pengumpulan data menggunakan teknik *total sampling*. Sampel pada penelitian ini adalah perawat ruang rawat inap RSI PKU Muhammadiyah Pekajangan Pekalongan dengan jumlah 73 responden. Alat ukur yang digunakan adalah kuesioner penerimaan sistem *Technology Acceptance Model* (TAM). Analisis data pada penelitian ini dengan menggunakan *analisis univariat*.

Hasil: Hasil penelitian menunjukkan bahwa persepsi perawat terhadap rekam medis elektronik di RSI PKU Muhammadiyah Pekajangan Pekalongan terdapat dalam kategori baik 48 responden (65,8%) 48, sangat baik 14 responden (19,2%), cukup 11 responden (15,1%). Persepsi perawat terhadap kemanfaatan RME 36 (49,3%) menyatakan baik, persepsi perawat terhadap kemudahan RME 45 (61,6 %) cukup, persepsi perawat terhadap minat perilaku RME 42 (57,5%) baik, persepsi perawat terhadap penggunaan aktual RME 46 (63,0%) baik.

Simpulan: Penelitian ini menunjukan bahwa penerapan rekam medis elektronik dari Perspektif Perawat di RSI PKU Muhammadiyah Pekajangan Pekalongan terdapat dalam kategori baik.

Kata Kunci: Penerapan, Rekam Medis Elektronik, Perawat

ABSTRACT

Overview of Electronic Medical Record Implementation from the Perspective of Nurses at the PKU Muhammadiyah Pekajangan Islamic Hospital in Pekalongan

Rodhiyatul Khasanah¹, Mokhamad Arifin²

Introduction: Every hospital is required to comply with the documentation of all activities in the hospital management information system (SIMRS). The policy emphasizes the importance of implementing an integrated information system to support the best service, including the use of electronic medical records (EMR). Although electronic medical records are widely applied, specific studies on their use from a nursing perspective are still limited. This study aims to determine the overview of the application of electronic medical records from the perspective of nurses at RSI PKU Muhammadiyah Pekajangan Pekalongan.

Method: This study is a quantitative descriptive study with a cross-sectional approach. Data collection uses the total sampling technique. The sample in this study were nurses in the inpatient ward of RSI PKU Muhammadiyah Pekajangan Pekalongan with a total of 73 respondents. The measuring instrument used was the Technology Acceptance Model (TAM) system acceptance questionnaire. Data analysis in this study used univariate analysis.

Results: The results showed that the nurses' perceptions of electronic medical records at the PKU Muhammadiyah Pekajangan Pekalongan Islamic Hospital were in the categories of good 48 (65.8%), very good 14 (19.2%), and sufficient 11 (15.1%). The nurses' perception of the usefulness of the EMR was 36 (49.3%) good, the nurses' perception of the ease of the EMR was 45 (61.6%) sufficient, the nurses' perception of the behavioral interest in the EMR was 42 (57.5%) good, the nurses' perception of the actual use of the EMR was 46 (63.0%) good.

Conclusion: The application of electronic medical records from the perspective of nurses at the RSI PKU Muhammadiyah Pekajangan Pekalongan is in the good category.
