**An Overview of the Quality of Life of Breast Cancer Patients: A Literature Review**

**The backgrounds:** patients who are declared to have breast cancer will experience both physical and psychological impacts that affect their quality of life. Decreased quality of life will certainly interfere with daily life and activities.

**The Objectives:** this study aims to describe an overview of the quality of life of breast cancer patients.

**The Methods:** it is a literature review with an online searching from Semantic Scholar and Google Scholar so that it obtained 5 articles in inclusive and exclusive criteria.

**The Results:** the results of the research from these articles show the characteristics of the majority of respondents aged <65 years 237 (100%), most of them have secondary and high education levels as much as 113 (47.67%), most of the work is housewives or not working as much as 154 (64.97%). Meanwhile, based on the results of the study of 5 articles with the quality WHOOL-BREF instrument, most of them had a good quality of life as much as 70 (77.77%). 41 (65.08%) and as measured using the QOL-Indian Scenario instrument had a quality of life below the average of 43 (51.20%).

**The Results:** based on the results of the analysis, it is known that the majority of breast cancer patients quality of life is good.

**Keywords:** *Breast cancer, Quality of life*
